

Saplings Colouring Package #38

Did You Know?

Ten Fun Facts About Cats

1. Cats spend around 13 to 16 hours every single day sleeping, which means they are asleep for about 70% of their lives!
2. A cat can jump up to six times its own height in a single bound.
3. Just like humans have unique fingerprints, no two cats have the exact same pattern on their noses.
4. Cats don't sweat like people do; the only place they release sweat is through the soft pads on their paws.
5. Most cats have 18 toes total—five toes on each front paw and four toes on each back paw.
6. Cats are one of the few animals that cannot taste anything sweet because their taste buds don't react to sugar.
7. When a bunch of adult cats hang out together, the fun word for their group is a "clowder".
8. Cats have 32 muscles in each ear, allowing them to swivel their ears completely around 180 degrees to catch every little sound.
9. Cats don't just have whiskers on their cute faces; they also have special touch-sensing whiskers on the backs of their front legs.
10. A cat's purr vibrates at a low frequency (between 25 and 150 hertz) that scientists believe helps reduce stress and even heal bones and muscles.
