

Saplings Colouring Package #48

Did You Know?

Ten Fun Facts About Alpacas

1. Alpacas make a soft humming sound when they are happy, curious, relaxed, or even worried.
2. Newborn alpacas are called crias (pronounced kree-uhs).
3. Alpaca wool comes in more than 20 natural colours, ranging from pure white and grey to dark brown and jet black.
4. Alpacas do not have any teeth on the top front of their mouth. They only have bottom teeth and a hard pad, which means they gently clip grass instead of pulling it up by the roots.
5. Their fleece is warmer and softer than sheep's wool, and it doesn't itch because it has no lanolin oil.
6. Just like cows, alpacas have three stomach chambers to help them digest tough plants and grass easily.
7. Alpacas are very neat and tidy. The whole herd uses the exact same spot in the field as a shared bathroom to keep their pasture clean.
8. If an alpaca is scared or annoyed by another alpaca, it might spit a stinky mix of air, saliva, and grass at them. They rarely spit at humans.
9. Instead of sharp hooves, alpacas have two toes with toenails and soft, padded feet that don't damage the grass when they walk.
10. Alpacas are very social herd animals and get sad or lonely if they have to live all by themselves.
