Did You Know?

Ten fun facts about zebras

1. No two zebras have the same stripe pattern, similar to human fingerprints.
2. Zebras are fundamentally black animals with white stripes, not the other way around.
3. A zebra's stripes help confuse biting insects like flies, making it hard for them to land.
4. Zebras can sprint up to 65 km/h (40 mph) to escape predators like lions.
5. Zebras use distinct sounds, like snorts and barks, plus body language (ear position) to communicate.
6. A baby zebra (foal) can stand and run within an hour of being born.
7. Zebras live in tight-knit family groups called harems, led by a stallion, which sometimes merge into large "super herds."
8. Their strong night vision helps zebras spot predators in the dark.
9. Zebras use powerful kicks and bites to fight off threats, forming defensive circles as a group.
10. There are three distinct zebra species: Plains, Grévy's, and Mountain zebras, all native to Africa.
